Privileged Access Management for SMBs

What is a privileged user?

A privileged user is an IT professional who has access to an organization's confidential or sensitive data. (Example: Developer, IT Security Specialist, Database Administrator, IT Director, etc.)

In 2019, 61% of IT pros are still not monitoring privileged accounts.[1]

Once you're a victim there's **nothing** you can really do but ...

IT PROFESSIONALS KNOW ABOUT THE PROBLEM AND STRUGGLE TO CONTROL INSIDER THREATS.

72% of IT pros admit they're vulnerable to insider threats[2]

It usually takes **196 Days** to discover a data breach.

In the United States, the average data breach cost $7.9 million (compared to 3.9 million worldwide).[3]

You can minimize the risk of threats by controlling privileged access.

Top 6 Features SMBs Should Look For in a Privileged Access Management Solution[4]

1. Ease of deployment and management
2. Secure password vault
3. Logging and reporting
4. Built-in two-factor authentication
5. Brokered account
6. Role-based access to credentials

Secure, Manage and Monitor Access to Privileged Accounts
